

Marketplace experience

The Productsup P2C platform cuts through commerce anarchy with seamless integration and aggregation of product data across thousands of supplier catalogs. Our Marketplace solution enables retailers and brands to list products on popular marketplaces and unlock new streams of revenue. The Productsup smart Marketplace solution supports businesses with product data synchronization, as well as managing order and tracking information across all internal and external systems.

Give wholesalers, distributors, retailers quick and easy access to your enriched product information.

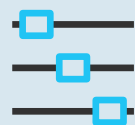

- ▣ Order synchronization exchanges essential product data with external ecommerce systems. It syncs information such as sales and inventory levels between your store management system and the marketplaces you want to serve.
- ▣ Add Data Sources to import order information from any marketplaces.
- ▣ Aggregate, format, and export order information to your store management system without the need for IT support.

Productsup has export templates for all of the leading store management systems and provides custom templates for bespoke integrations.
